

Lesson 01 Demo 04

Develop Authentication UI Page

Objective: To develop authentication UI Page

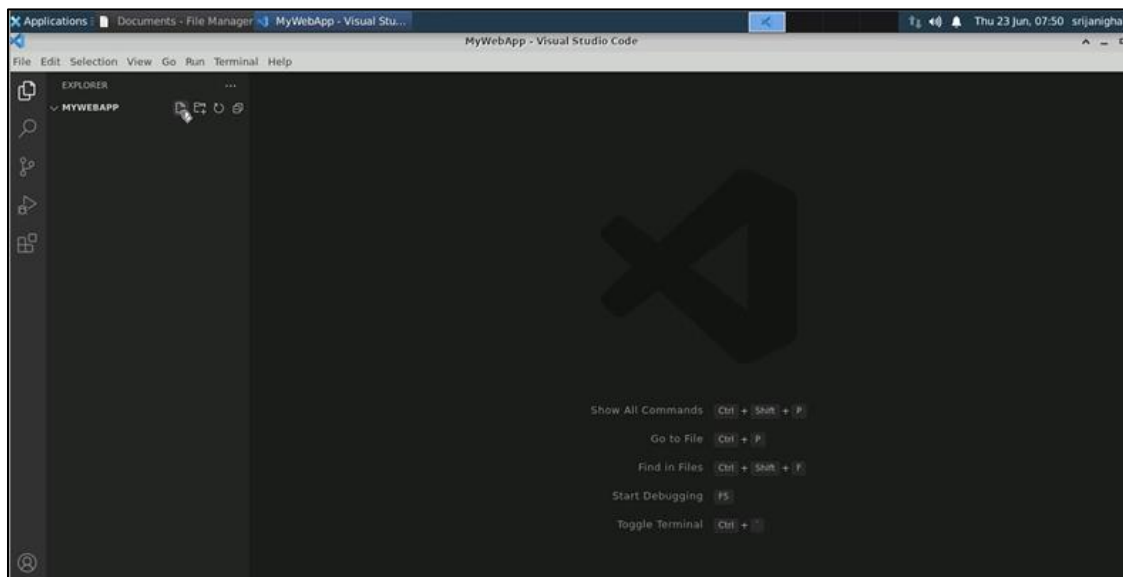

Prerequisites: Visual Studio Code

Steps to be followed:

1. Creating a new file named register.html
2. Creating a new file named login.html
3. Navigating to the login page

Step 1: Creating a new file named register.html

- 1.1 Click on MyWebApp to open the file.

1.2 Create a new file named register.html.

```

1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>eCommerce Store</title>
5     <style>
6       ul{
7         list-style-type: none;
8       }
9       li{
10        float: left;
11        margin-right: 8px;
12      }
13    </style>
14  </head>
15  <body>
16    <h3>Welcome to eCommerce Store</h3>
17    <ul>
18      <li><a href="index.html">Home</a></li>
19      <li><a href="about.html">About</a></li>
20      <li><a href="products.html">Products</a></li>
21      <li><a href="profile.html">Profile</a></li>
22      <li><a href="contact.html">Contact</a></li>
23      <li><a href="register.html">Register</a></li>
24      <li><a href="login.html">Login</a></li>
25    </ul>
26  </body>
27 </html>

```

Step 2: Creating a new file named login.html

2.1 Create a login.html page.

```

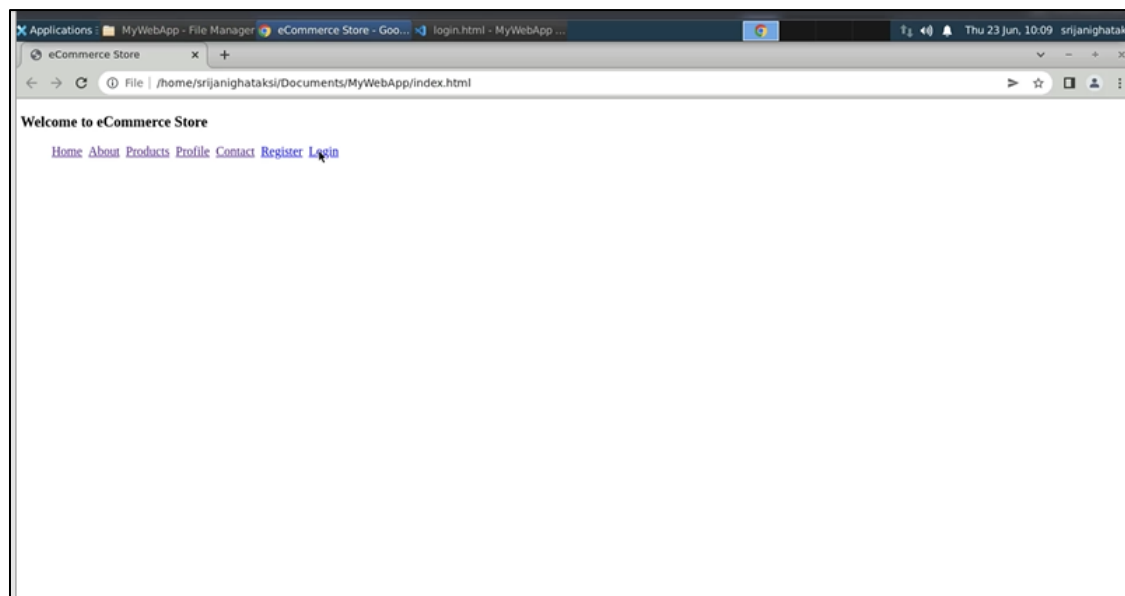

1

```

2.2 Add the relevant code in login.html file.

![Login](images/login.png)

2.3 Checking the webpage to check the design and components added.

Step 3: Navigating to the login page

3.1 Checking the design and fields on the login page.

3.2 Copy the code of login page to register page as fields are similar and then modify it.
